About Me

I am a skilled full-stack software developer with 10 years of experience in building and maintaining high-quality web and mobile applications. Specializing in both frontend and backend development, I work with modern frameworks such as Vue.js, React, and Next.js, alongside backend technologies like PHP, CodeIgniter, Laravel, Node.js, Python, and databases including MySQL and PostgreSQL. I have collaborated with clients across various industries to deliver custom, scalable, and user-friendly software solutions tailored to their needs. With strong problem-solving skills, attention to detail, and a commitment to clean, functional code, I am confident in my ability to help you achieve your goals through innovative and reliable technology.

Work Experience

Fullstack Sofware Developer
RXN3D - Digital Dental Lab Case Management Platform

May 2025 to Present

- Developed full-stack features for RXN3D using React, Vue, Next.js, and Laravel 10, delivering a smooth and intuitive user experience for dental labs and offices.
- Built and maintained backend modules in Laravel 10, ensuring robust case management workflows and secure data processing.
- Integrated AMQP (RabbitMQ) for asynchronous messaging to support real-time updates, technician notifications, and workflow automation.
- Implemented Elasticsearch to enhance search accuracy and case retrieval performance across large dental data sets.
- Designed and optimized RESTful APIs supporting lab workflows, digital case submissions, technician tracking, and admin tools.
- Improved platform performance through optimized database queries, caching strategies, and scalable backend architecture.
- Collaborated with cross-functional teams to improve user flows, dashboard analytics, and core case management features.
- Ensured system reliability, high availability, and maintainability using modern development practices and clean code standards.

Software Engineer
Teko Philippines Fast & easy online booking. Immediate confirmation. Satisfaction guaranteed or money back! Book online in minutes. Affordable aircon, ref, washer, heater, TV & electrician services.

May 2024 to Present

- Led the backend development of a fast, scalable online booking system using Laravel.
- Integrated AMQP (RabbitMQ) for asynchronous messaging to enhance booking processing and notifications.
- Implemented Elasticsearch for advanced search and analytics in the admin dashboard and booking system.
- Designed and optimized RESTful APIs to support high-traffic booking transactions.
- Enhanced system performance with caching strategies and optimized database queries.
- Developed a real-time booking system with dynamic service availability, secure payment integrations, and seamless user interactions.
- Collaborated with cross-functional teams to continuously innovate and improve platform features.
- Ensured high availability and scalability of backend services through efficient architecture and deployment strategies.

Senior Fullstack Engineer
Multisys Technologies Corporation is considered one of the leading software solutions companies in the Philippines.

May 2020 to May 2024

- Led full-stack development projects using Node.js, React, and MongoDB, implementing scalable and high-performance applications.
- Built intuitive user interfaces and dynamic features with React, incorporating Redux Saga to manage complex asynchronous flows.
- Designed and developed RESTful APIs using Express.js for enterprise systems, ensuring performance, scalability, and security.
- Mentored junior developers, promoting the adoption of best practices and improving the quality of deliverables.
- System: Integrated complex systems for data management, reporting, and real-time processing.
- Optimized database performance, ensuring scalability to handle high-volume transactions.
-

Mid FullStack Software Engineer
W-Tech Solutions is one of the fastest-growing IT Companies in Asia that provides software solutions with outstanding client support services.

April 2018 to May 2020 (2 years, 1 month)

- Developed backend services using Node.js and Express.js, and responsive, real-time front-end interfaces with **React**.
- Enhanced front-end functionality with dynamic UI/UX features, incorporating **Redux Saga** for efficient state management.
- Created reusable and styled components with Styled Components, ensuring consistency in design and responsiveness.
- Focused on creating scalable systems and optimizing code for performance and reliability.
- System: Designed and developed real-time web applications for client services and internal dashboards.
- Collaborated with designers, QA teams, and product managers to ensure seamless and timely project delivery.

Junior Software Engineer
Ingram Micro helps businesses fully realize the promise of technology™— maximizing the value of the technology they make, sell or use.

April 2014 to May 2018 (4 years, 1 month)

- Assisting in designing, developing, and maintaining software applications and systems
- Writing and testing code with the guidance of senior developers
- Learning and utilizing programming languages and tools such as Php, Laravel, Node.js, and Databases.
- Collaborating with cross-functional teams to identify and solve problems
- Keeping up-to-date with the latest software development trends and technologies, and contributing to the improvement of existing systems.

Freelance Experience

Full Stack Software Engineer

Dav.IO is a high-performing, value-driven group of Filipino professionals committed to provide excellent quality service to help businesses achieve their goals.

Feb 2020 to Feb 2021 (1 year

- Managed AWS infrastructure to support a scalable e-commerce platform with high availability.
- Built and optimized React-based front-end interfaces for seamless user experiences, integrating Redux Saga to handle complex state management and asynchronous workflows.
- Developed reusable and responsive UI components using Styled Components, ensuring a consistent and visually appealing design.
- Integrated secure payment systems and ensured smooth data flow between the front-end and back-end.
- System: Designed and implemented an e-commerce platform for managing product listings, payments, and user accounts.

Full Stack Software Engineer

FootballerLife is the only football-focused global online platform that is founded by professional football players and built for the football fanatic.

April 2021 to Oct 2021 (6 months)

- Refactored the codebase from Laravel 7 to Laravel 8, improving system stability and functionality.
- Integrated Algolia for search optimization, enhancing the speed and relevance of content retrieval across the platform.
- Developed dynamic and interactive front-end components using **React**, and integrated **Redux Saga** for efficient state management and handling of asynchronous data.

Senior Software Engineer

MyMoovz (formerly known as MyConCat and owned and operated by RealMarket Pty Ltd) is a secure cloud platform making it easier for everyone moving house. We automate all the tedious management and organisation for everyone involved in the move.

Oct 2021 to Oct 2022 (1 year)

- Refactored code from Laravel 7 to Laravel 8, optimizing speed and scalability.
- Restructured the database to improve system performance during high traffic.
- System: A platform that automates the management of home moving processes for customers and service providers.

Fullstack Software Engineer

IntelHouse IntelHouse serves as a lead generation cornerstone for both conservative and innovative businesses. We offer a cost-effective sustainable solution for home improvement sales teams.

JULY 2023 to NOV 2023 (Contractual)

- Developed systems using Angular, Vue, **React**, Next.js, Laravel, and Express.js, ensuring scalability and high performance.
- Integrated multiple front-end frameworks to enhance user interactivity, dynamic updates, and smooth transitions.
- Utilized React and **Redux Saga** to build responsive and dynamic user interfaces with complex state management and asynchronous flows.
- Implemented **Styled Components** to create a modern, consistent, and visually appealing user interface.
- System: Designed and developed a lead generation and CRM platform to manage home improvement projects and sales leads.
- Focused on building a responsive, high-performance platform that effectively supported sales operations and customer management.

Full-Stack Developer
Earn-Books - (SaaS Accounting Platform)
June 2025 to Sept 2025 (2 Months)

- Developed a full-stack SaaS accounting application using Vue 3 + Vite for the frontend and Laravel 10 for backend APIs and business logic.
- Built financial modules including invoice management, expense tracking, transaction logs, customer records, and financial reports.
- Integrated Stripe for subscription billing, automated renewals, and webhook-driven payment event handling.
- Implemented efficient state management using Pinia and high-performance API communication using Vue Query.
- Designed and optimized accounting database structures for ledgers, transactions, and financial summaries.
- Built reusable Vue UI components and a fully responsive dashboard optimized for speed and usability.
- Developed secure Laravel APIs for financial operations, user authentication, subscription access, and data exports.
- Improved frontend performance through Vite, code splitting, lazy loading, and cached queries.
- Ensured accuracy of financial computations using Laravel service classes, validation rules, and transaction-safe DB writes.
- Managed deployments, environment configurations, and performance tuning in production.

Full Stack AI Software Engineer
Waal.ai is a convenient conversation-to-insight **Saas** platform. It turns raw ideas into targeted interviews and delivers decision-ready findings fast.

Sept 2025 to Nov 2025 (1 Month)

- Built a React-based interview guide generation platform using TypeScript, Vite, and Zustand for state management, enabling users to create AI-powered interview guides through conversational interfaces
- Implemented real-time data synthesis using Azure Web PubSub for live interview insights, metrics, and participant analysis with automatic UI updates
- Developed comprehensive authentication system with Supabase (OTP email verification and LinkedIn OAuth) with rate limiting and session persistence
- Created billing and credits management system with subscription plans, payment processing, and credit tracking integrated with Azure API Management
- Designed and implemented chat-based interview guide generation with debounced API calls, caching, and real-time guide panel updates
- Built interview guide management system with pagination, resume functionality, archive operations, and export to Word document capabilities
- Integrated Azure Functions API endpoints for interview guide generation, synthesis, transcript management, and user subscription services
- Implemented protected routes, error boundaries, and responsive UI components using modern React patterns and CSS styling
- API using python with **LangChain** and **LangGraph** and Ollama with vertex

Relevant Skills

Methodologies & Project Management:
- Agile Methodology (Scrum), JIRA, ClickUp

Frontend Development:
- JavaScript (ES6+), Vue.js, **React** (TypeScript), **Redux Saga**, **Styled Components**, Next.js, Tailwind CSS

Backend Development:
- PHP (Laravel 5 to 10), CodeIgniter, Node.js, NestJS, Sail Framework, Adonis.js (4 & 5 with TypeScript), Python

API & Integration:
- REST API Integration, WebSocket, Socket.IO

Databases:
- PostgreSQL, NoSQL (MongoDB), Redis, Elasticsearch

Cloud & DevOps:
- AWS (S3), Docker, Kubernetes, RabbitMQ

Version Control & CI/CD:
- Git, GitHub, GitLab

Other Tools:
- Redis, RabbitMQ

Education History

Bachelor of Science in Computer Science
University of Muntinlupa
Year of Graduation: 2014

- Choir Member of UM
- Best Application on Thesis
- Dean Lister 2012
- Dean Lister 2013
- Dean Lister 2014

Project Milestone

Project Leadership:
- Successfully led software projects, applying skills gained through continuous learning and practical experience.
- Obtained certification in project management methodologies, enhancing leadership capabilities.

Scalable System Design:
- Designed and developed scalable software systems using Node.js and MongoDB, refining skills through ongoing learning and experimentation.
- Earned certification in advanced web development technologies, validating proficiency in building robust, scalable solutions.

Code Quality Assurance:
- Implemented robust testing strategies and coding standards, continually refining practices through self-directed learning and industry best practices.
- Completed certification in software quality assurance, demonstrating expertise in ensuring code reliability and maintainability.

Cross-Functional Collaboration:
- Facilitated effective collaboration between teams, applying communication skills honed through workshops and practical experience.
- Obtained certification in agile methodologies, strengthening the ability to align technical solutions with business objectives in cross-functional environments.
